

**MATHEMATICAL
RESEARCH**

**MATHEMATISCHE
FORSCHUNG**

Parcella'86

edited by

T. Legendi · D. Parkinson

R. Vollmar · G. Wolf

Band 29

Akademie-Verlag · Berlin

(OCR-Scan der Proceedings 1986)

Herausgeber:

Dr. Tamás Legendi
Hungarian Academy of Sciences
Research Group on Automata Theory, Szeged

Prof. Dennis Parkinson
DAP Support Unit, Queen Mary College, London

Prof. Dr. Roland Vollmar
Institut für Informatik,
Technische Universität Braunschweig

Dr. Gottfried Wolf
Akademie der Wissenschaften der DDR
Zentralinstitut für Kybernetik und Informationsprozesse, Berlin

Die Titel dieser Reihe werden vom Originalmanuskript
der Autoren reproduziert

ISBN 3-05-500175-3
ISSN 0138-3019

Erschienen im Akademie Verlag Berlin
DDR-1086 Berlin, Leipziger Str. 3-4

(C) Akademie Verlag Berlin
Lizenznummer: 202.100/411/86

Printed in the German Democratic Republic
Gesamtherstellung VEB Kongreß- und Werbedruck, 9273 Oberlungwitz
Lektor: Gisela Lagowitz
LSV 1095
Bestellnummer: 763 476 4 (2182/29)
036000

TABLE OF CONTENTS

I) Invited Papers

Flanders, P.M.; Parkinson, D. Data organisation for the effective use of processor arrays	11
Alliyev, V. Recent results in the theory of homogeneous structures	30
Gössel, M.; Rebel, B. Data structures and parallel memories	49

II) Cellular Systems

Legendi, T. Cellware Implementation (invited paper)	61
Zsoter, A. A cellprocessor based on 16-state cells	66
Tüzkö, T.; Toth, J. Simulation and testing of the SPP chip	70
Bernath, L. Fluid-cooled packages for fault-tolerant wafer scale integrated cellprocessor circuits	78
Almasi, J.; Kovacs, I.; Medvey, M; Simon, E.; Székely, Z. On the implementation of the CELLAS 2.1 system	83
Zadori, L. A Boolean function optimization for cellular microprogram generation	90
Katona, E. Assembly-level programming of cellular processors	94
Toth, N. Fault tolerant programming of a two-layer cellular array	101
Ghymes, B. A clustering procedure on the cellprocessor based on ISODATA algorithm	109

Köles, P. Picture processing on different types of cellular processors	114
Palagyi, K. Cellular algorithm for matrix multiplication	122
Szekely, Z. A fast Fourier tranformation algorithm for cellular processor	130
Hellwagner, H. A fault detection method in partially utilized cellular (systolic) arrays	138
Türkidjiev, N.P. On the synthesis of systolic algorithm and arrays	147
Zamperoni, P. Analysis of some migration processes in a 2-dimensional cellular space	155

III) Array Systems

Kovalevsky, V.; Luth. N. Parallel algorithms in image processing and computer graphics	163
Fritsch, K.; Schwarze, G. VLSI-friendly processor designs for machine vision systems	172
Kiesewetter, H.; Eichhorn, N. Bitexact symmetric scaling in rasters	179
Kinnemann; G. MMS-16-A multi-microprocessor system of the GDR	187
Stopp, A. Decentralized diagnostics in regular structured multiprocessor systems	192

Wächter, F. Structure and application of a permutation network	199
Creutzburg, R. Parallel optimal subtree access with linear memory functions	203
IV) Theory	
Hemmerling, A. On the power of cellular parallelism	210
Katyaev, I.A.; Katyaev, A.V. Homogeneous structures for optimal control problem solving	218
Meinel, C. The parallelization index of synchronous systems	226
Mizuno, H. A neural network model for pattern recognition	234
V) Miscellaneous	
D'Hollander, E.H. Worst case bounds for independent task scheduling	243
Dsiollos A.; Antonov, I. Using the data flow approach in a multiprocessor system	251
Otrubova, B.; Sykora, O. Orthogonal computer and its application to some graph problems	259
Sapaty, P.; Kocis, J. A parallel network wave machine	267
